FIRE HYDRANT TESTING

On Tuesday, November 15, 2016 starting at 9:00am, the Sunsites-Pearce Fire District in cooperation with Southwest Utilities Management, DBA Clear Springs Utilities Inc. will be conducting tests on fire hydrants within the Sunsites village area. During this time it is possible residents will have decreased water flows and sediment or discoloration of water to their homes and businesses.

The condition and operability of the fire hydrants within the Sunsites area is a concern that was brought to the attention of the Sunsites-Pearce Fire District governing board over the last year. In response to these concerns the fire board directed the establishment of a committee to assess the operability of hydrants and identify any replacement needs. The District will be working with the local water company to identify solutions for replacement. The Sunsites-Pearce Fire District is committed to delivering the best services possible and we thank you for patience as we conduct these tests to help improve the safety of this community.
